Webalo Adds Mobile Client

8th February 2007

By Staff Writer

Webalo Inc, which runs a hosted service that paints a human face onto web services, is unveiling what it calls a

The Mobile Dashboard can be used for distributing existing business reports such as scorecards and dashboards over devices such as RIM Blackberry, Microsoft Windows Mobile, Palm Treo, and Java-enabled smart phones. As part of the offering, Webalo supports the native look and feel of the specific device target.

In so doing, it replaces middleware with a hosted service that eliminates the programming for the customer. Administrators can set up reports and authorize users working from a web-based console.

Founded in 2000, the company currently works with partners such as Actuate, IBM, Nokia, Q4bis, and RIM to add consistent user interfaces to web services via a hosted offering.

The Webalo Mobile Dashboard is available now, and can be downloaded for a 30-day free trial.
