## Featured application of the week

March 27, 2007

### Application of the Week -- Webalo Mobile Dashboard

The Webalo Mobile Dashboard is an on-demand service that provides mobile workers with the up-to-the-second enterprise information they need in an actionable form that is optimized for their S60 3rd Edition device screens. The service automatically delivers to decision makers business intelligence reports about such key performance data as sales forecasts, inventory status, and staff utilization. The format overcomes the access and readability problems sometimes encountered when reading attachments on the smaller form factor of mobile screens.

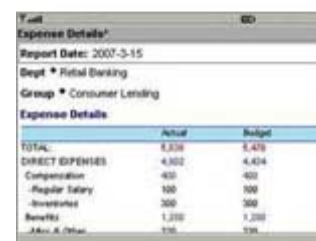

The Mobile Dashboard is an IBM-hosted Software as a Service (SaaS) offering. Using a standard Web interface, an administrator sets up permissions for each individual user and formats the reports by answering questions in a simple, step-by-step, question-and-answer process. The service contains a Mobile Dashboard Wizard, which guides the administrator through the process of configuring the report content to make it easy to read on an S60 device. As soon as new versions of the reports are sent to the hosted Webalo Service, it transforms the files into a form that is easily readable on S60 3rd Edition devices such as Nokia Eseries and Nseries devices. Then it either instantly pushes it to preselected recipients or makes it available on a "pull" basis in response to user requests. This is very different from most enterprise-connected mobile middleware services, where the user must "pan and scan" through documents that have not been converted from their much larger screen formats. The service lets the mobile worker select the information to view, drill down to important details, and bookmark favorite screens for quick reference.

Expense Subtotals*		
Report Date: 2007-3-13		
Dept: * Total Company		
Group: * Totals		
Expense Subtotals		
	Actual	Budget
TOTAL	188,778	184,832

Compensation	400	400
Regular Salary	100	100
Incentives	300	300
Benefits	1,200	1,200
Admin & Other	110	110

The service also provides the same transformational processes for mobile workers whose devices are based on other mobile platforms, such as PDAs, giving the information the native look and feel of each target device. In addition, the Mobile Dashboard takes full advantage of the extended security features of S60 3rd Edition, and it allows the mobile worker to work offline.
