

## Webalo Mobile Dashboard Datasheet

### Connecting Smartphones to the Exact Information Users Need

When you can connect mobile workers – in minutes and hours – to the enterprise content and tasks they rely on, every mobile project is worth doing. Instead of waiting months and years to measure ROI, the gains in productivity, reduced overhead, and lower IT operating costs can – with the Webalo Mobile Dashboard (MD2) – be realized in hours and days.

### IT Administrators

MD2's integrated web-based Agenda environment guides administrators, step-by-step, through the process of connecting to enterprise resources, choosing the content and tasks that users want to access on their smartphones, and generating the interface that appears on mobile users' BlackBerry, Windows Mobile, Palm, Symbian, or Java-enabled devices. No specialized IT skills are required and, without the need for coding and software development kits (SDKs), enterprise to mobile deployment can happen 100 times faster.

Connecting to enterprise resources is simple. Using MD2's Agenda environment, administrators follow on-screen instructions to connect to the enterprise resources they want and then configure them for use on smartphones. Agenda enables administrators to configure mobile access to individual enterprise applications or combine functionality and information from multiple enterprise applications and consolidate them in a single menu on a mobile users' smartphone, providing a personalized, instantly accessible set of choices that makes mobile workers more efficient and productive.

### Agenda provides direct mobile connection to:

**DATABASES.** DB Connect enables smartphone access to any of the leading enterprise databases (Oracle, Microsoft SQL Server, IBM DB2, & MySQL). Existing database SQL commands are automatically imported into MD2's Agenda so that administrators can easily enable real-time, mobile database access.

**REPORTS.** Reports from business intelligence platforms or any other enterprise application (Excel or CSV format), can be imported into MD2 and configured in minutes to be delivered to smartphones. Administrators simply upload a copy of the report, answer some questions and then save the resulting configuration. Each time reports are updated from the enterprise application, MD2 receives a copy of the latest data (email or upload), transforms it and delivers it in seconds to users for interactive viewing on their smartphone.

**XML WEB SERVICES.** MD2 automatically consumes XML Web services (described by the WSDL standard) and transforms them into smartphone-based tasks that let users complete business processes through real-time interaction with enterprise applications.

**WEB SITES.** Web Connect talks to HTML Web sites (including sites with intensive use of JavaScript), and lets companies create a smartphone interface to an existing application by capturing the application's web interface. Agenda guides administrators through the simple steps required to extract the data from these sites, and generate a smartphone interface that provides users with secure mobile access to any web-facing enterprise application.

## ENTERPRISE

## MOBILE USERS

### Mobile Users

The Webalo Client provides mobile users with a secure, personalized, task-oriented and graphical smartphone interaction with the enterprise applications they require. The Webalo Client automatically generates an interface that's compatible with the user's device to provide on-line or off-line interaction with enterprise applications.

### Hosted or Virtual

Enterprises that prefer a hosted, fully managed solution can choose the Mobile Dashboard's hosted service. Enterprises that require an in-house, behind-the-firewall implementation can choose Webalo's Virtual Appliance which is delivered as a virtual machine image and runs on the leading virtualization platforms (hypervisors), including Xen®, VMware®, and Microsoft Windows Server® 2008 Hyper-V™.

### Device Compatibility

MD2 runs on any BlackBerry, Windows Mobile, Palm, Symbian, or Java-enabled smartphone.

### Compatible Enterprise Platforms

MD2 supports any enterprise application that provides access via JDBC, Excel, CSV, XML Web services and HTML/JavaScript web pages.

**The Webalo Mobile Dashboard changes the economics of enterprise mobility. It puts enterprise data and functions on smartphones 100 times faster than traditional enterprise-to-mobile approaches and provides personalized mobile capabilities that meet the individual needs of any end-user.**
