

Webalo[®]

The app for enterprise[™]

THE WEBALO PLATFORM

Webalo is an enterprise-grade, mobile and desktop rapid application development platform, designed to enable companies to easily transform their existing enterprise applications into User First[™] personal applications, where every user has just the information they need, on their device, to help them get their job done.

Webalo's patented technology is enterprise-ready, built to operate in the face of massive amounts of real-time transactional usage by thousands of users, helping them to make better, more informed decisions to make their businesses more productive.

APP ORCHESTRATION & GENERATION

Webalo's self-service administrative console empowers users to orchestrate data sources, configure them and generate apps. Connect to the data – generate the app – click to deploy, to any device. It's a simple, yet powerful process with features that provide 100X the app productivity output of conventional IDE, SDK or other complex programming tools.

Webalo® *The app for enterprise™*

DEVICES

Webalo automatically generates apps for Android, Apple, BlackBerry and Windows smartphones and tablets as well as Chrome, Edge, Firefox and Safari desktop browsers. Apps are deployed and updated in real-time and users love the rich, native, experience, with all their enterprise apps in one secure client on their device.

Authentication

EMM

SECURITY

Single sign-on authentication, role-based authorization, integration with directory authentication services, access logging, auditing, strong encryption – all are automatically enabled through the Webalo Platform. Webalo also provides out-of-the-box integration with the leading Enterprise Mobility Management (EMM) products and, because there's no coding, Webalo eliminates the security vulnerabilities created by custom development approaches.

DEPLOY + MANAGE

Choose from Amazon AWS, Citrix Xen, Microsoft Hyper-V or VMWare, single or multi-tenant, cloud or behind-the-firewall deployments, all designed to operate in the face of massive amounts of real-time, transactional usage by thousands of users.

Enterprise app store management is also built-in, with capabilities to deploy, update, manage and maintain apps.

FEATURES

- Orchestrate apps from multiple data sources
- Cross-platform, application generation
- On-premise or in the cloud
- Enterprise grade platform

BENEFITS

- Visualize and interact with data from across the Enterprise
- Rapidly deploy critical enterprise applications
- Your choice of deployment model
- Secure, scalable 24/7 operation
